

Attention Builders and Remodelers

Are you aware that the regular incandescent bulb is being phased out in 2012?
Want to offer your clients the New L.E.D. recessed lighting?

L E D D O W N L I G H T

Show them something new and different, by offering and installing L.E.D. lighting throughout the house. Show them how they can be green and cut their electrical lighting bill by 90%. Many homeowners are asking about L.E.D. lights as they research their new addition or home remodeling project; now you can provide them with these. Gain valuable LEED points too!

Why use L.E.D. lights?

- ✓ They use only 10% of the energy of an incandescent bulb; — one 65 watt bulb uses about \$59 of electricity each year, an L.E.D. bulb \$6.
- ✓ They're dimmable and come in all the brightness, soft light, daylight, etc.
- ✓ They last for 20 years or more & are the most energy efficient light anywhere
- ✓ They use about half of the energy of a CFL bulb.
- ✓ They are green. No mercury or toxic chemicals, and are 100% recyclable.
- ✓ CFL's contain mercury and cannot be put in the trash, and last only 2-5 years.
- ✓ They are UL Approved, Energy Star and RoHS Compliant.
- ✓ L.E.D. lights run cooler...saves on air conditioning costs.

Perfect for recessed lighting in the Kitchen, Bath, Hallway, Dining Room, Family Room and elsewhere. Use your own cans, or use ours. We carry a complete line from spots to floods, outdoor and indoor, new work or retrofit, all standard sizes of recessed.

We are the exclusive regional distributor for the Enlux L.E.D. lighting line and will provide you and your clients with advice and guidance, and we offer discount pricing for qualified contractors.

Call Today! We'll send information for both you and your customers so you can start using the next generation in lighting--today!
