

Attention Homeowners

Are you aware that the regular incandescent bulb is being phased out in 2012?
Now you can install the Ultra-High Efficiency new LED lighting in your home?

LED DOWN LIGHT

Many homeowners are asking about L.E.D. lights as they research their new addition or home remodeling project---*Now* they are finally available! You can now be green and cut your electrical lighting bill by 90%. L.E.D. lights are the most efficient lighting available and can be used anywhere.

Why use L.E.D. lights?

- ✓ They use only 10% of the energy of an incandescent bulb; — one 65 watt bulb uses about \$59 of electricity each year, an L.E.D. bulb \$6.
- ✓ They're dimmable and come in all the brightness, soft light, daylight, etc.
- ✓ They last for 20 years or more & are the most energy efficient light anywhere
- ✓ They use about half of the energy of a CFL bulb.
- ✓ They are green. No mercury or toxic chemicals like the CFL, and are 100% recyclable.
- ✓ CFL's contain mercury and cannot be put in the trash, and last only 2-5 years.
- ✓ They are UL Approved, Energy Star and RoHS Compliant.
- ✓ L.E.D. lights run cooler...saves on air conditioning costs.

Perfect for recessed lighting in the Kitchen, Bath, Hallway, Dining Room, Family Room and elsewhere. We carry a complete line from spots to floods, outdoor and indoor, new work or retrofit, all standard sizes of recessed.

We are the exclusive regional distributor for the Enlux L.E.D. lighting line and can provide you with advice and guidance for any application!

According to the Dept. of Energy, one LED light will last for at least 22 years without ever needing a bulb change! You would need 25 incandescents or 2.5 CFLs to last that long.
